

Printing Without a Printer

Printing to a file is a good way to make a copy of something you would like to print later, or just have a copy. Use the following directions to print to a file on your Eee PC.

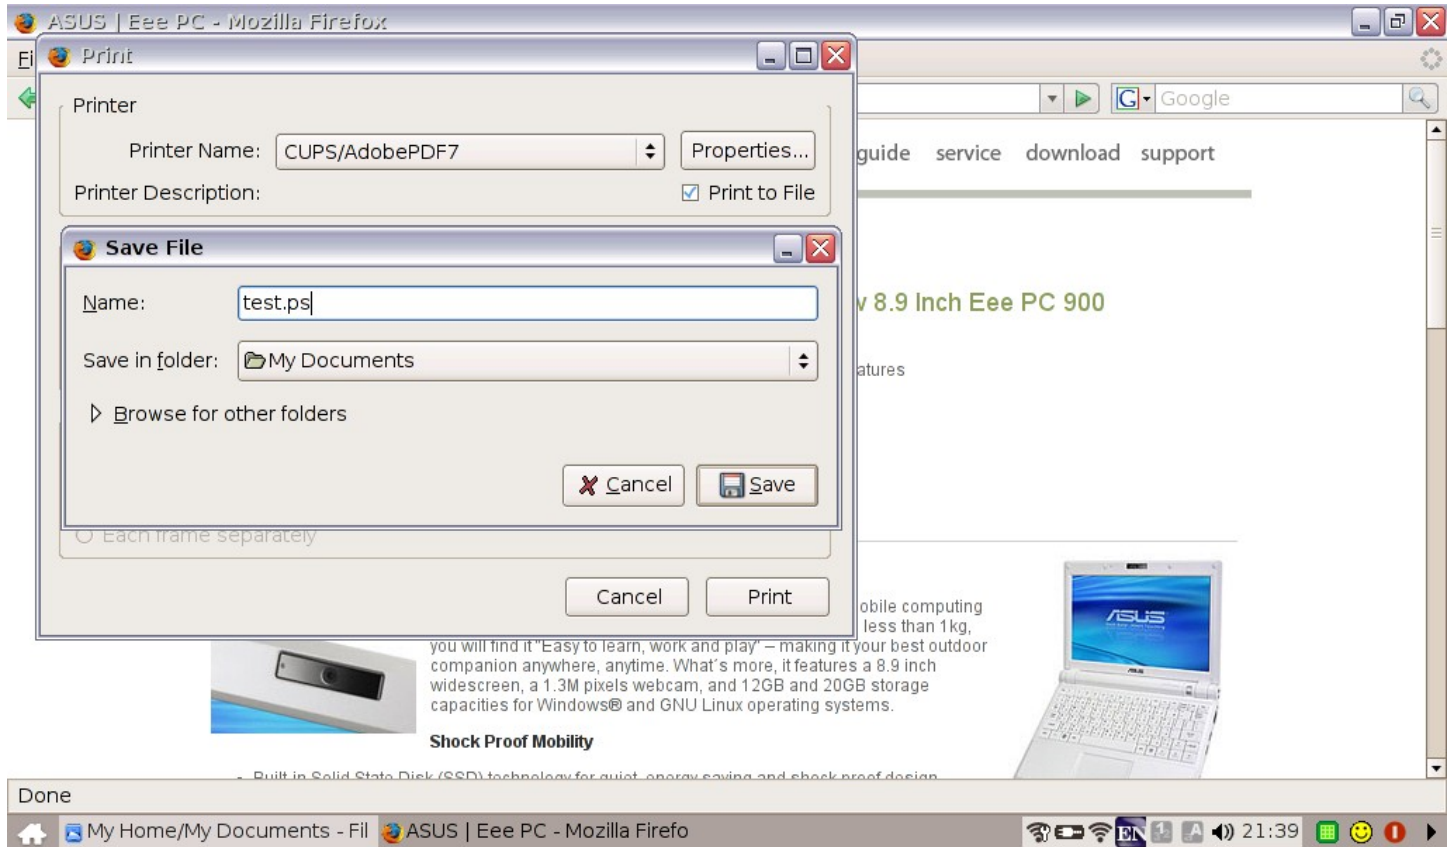

In the screen shot below I am printing a copy of the “Eee PC 900” web page. Simply select **File > Print...**

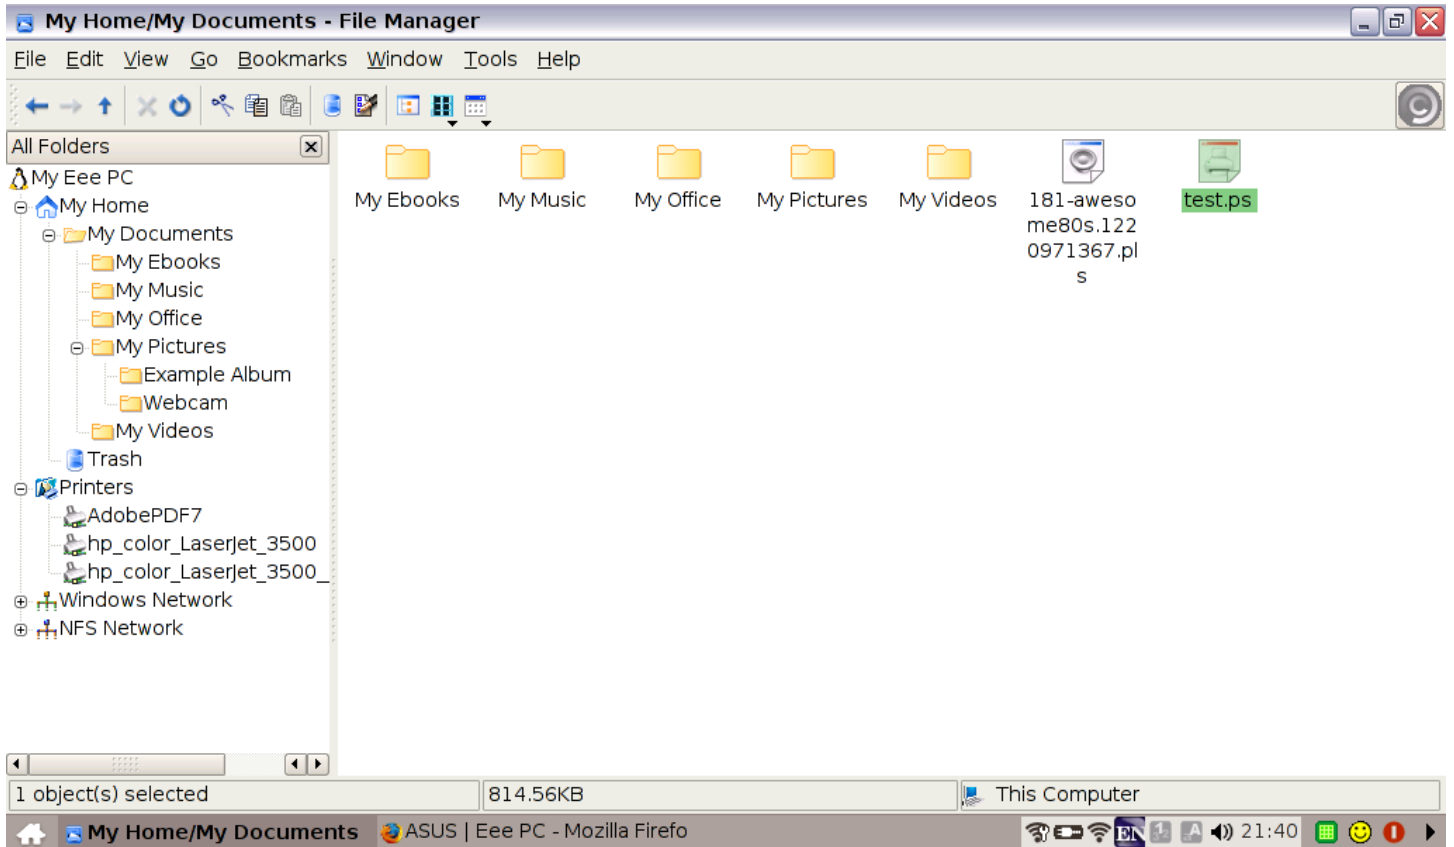

In the “Print” dialog, box check the “Print to File” check box. Then click the “Print” button.

Next type the name you would like to have the file saved to. In this example I'm using "test.ps". The ".ps" on the end tells the Eee PC it's a PostScript file.

Now go to the “*Work*” tab and click the “*File Manager*”. Under your “*My Documents*” folder you should see the “*test.ps*” file.

Double clicking the “test.ps” file will open the “PostScript Viewer”. You should now see the “Eee PC 900” web page I printed earlier.

file:///home/user/My Documents/test.ps - PostScript Viewer
